

ArcReach[®]
WELDING SYSTEMS

DON'T WALK WELD[™]

NEW XMT[®] 350 FieldPro[™] Systems
With ArcReach[®] Technology

MILLER®

XMT® 350 FIELDPRO™

WELDING SYSTEMS

WITH ARCREACH®

TECHNOLOGY

Don't waste thousands of dollars and hundreds of hours each year. Make the switch.

- Spend more time welding, less time walking
- Increase productivity, safety and uptime
- Get exceptional arc performance and weld quality
- Polarity reversing and non-polarity reversing models are perfect for structural welding, general construction, shipbuilding, process pipe and module assemblies

LET XMT[®] 350 FIELDPRO[™] PRODUCTS IMPROVE YOUR PRODUCTIVITY AND SAFETY.

JOBSITE EFFICIENCY

Jobsite inefficiencies and low productivity cost you money.

PAGE 4

ARC PERFORMANCE

Unstable arcs create bad welds and costly rework.

PAGE 5

EQUIPMENT UPTIME

Equipment downtime and repairs reduce productivity and profit.

PAGE 6

JOBSITE SAFETY

Slips, trips and falls can injure welders.

PAGE 7

EQUIPMENT BUDGET

“New” equipment that uses old technology wastes your equipment budget.

PAGE 8

WELDER CONTROL

Welders who can't easily make parameter adjustments can't make good welds.

PAGE 9

INCREASE PRODUCTIVITY.

Welders can get more done and increase uptime using XMT® 350 FieldPro™ welding systems.

- The standard XMT 350 FieldPro system is ideal for structural welding — for pipe welding, choose the XMT 350 FieldPro system with Polarity Reversing
- The voltage you set is the voltage you get with Cable Length Compensation (CLC™)
- ArcReach® technology increases arc-on time and Adjust While Welding (AWW™) technology lets welders make adjustments at the wire feeder or remote
- XMT 350 FieldPro welding systems eliminate the hassle of tracing weld cables back to the power source for adjustments
- Start your workday more quickly
- Work in more places with Auto-Line™ technology

GET EXCEPTIONAL ARC PERFORMANCE.

Produce stable arcs that maximize weld quality, reduce training time and minimize weld defects and costly rework.

- **Get consistent arc performance using weld cables hundreds of feet long, unlike many competing systems**
- **Minimize common weld failures**
- **RMD® and pulsed MIG are fully supported**
- **The XMT® 350 FieldPro™ system with Polarity Reversing helps ensure great results**

INCREASE EQUIPMENT UPTIME.

- Re-engineered ArcReach[®] SuitCase[®] 8 and 12 feeders have accurate and precise feeding abilities
- There are no expenses related to maintaining or replacing easily damaged control cords
- Products are protected against harsh operating conditions by impact-resistant cases

IMPROVE JOBSITE SAFETY.

Decrease the chances of slip, trip and fall injuries by eliminating the need to unnecessarily walk through multistory structures, cluttered jobsites or rough terrain.

MAXIMIZE YOUR EQUIPMENT BUDGET.

**XMT® 350 FieldPro™
welding power sources
are scalable and flexible
to meet changing
project needs.**

- Increase utilization of the welding fleet
- Enable welders to adapt to a busy jobsite's changing processes — no additional equipment needs to be brought in
- Simplify procurement processes
- XMT® 350 FieldPro™ machines and ArcReach® SuitCase® feeders can work with existing welding equipment*

*To realize maximum benefits, XMT 350 FieldPro machines should be paired with ArcReach SuitCase feeders, ArcReach Smart Feeders and/or ArcReach remotes.

GIVE WELDERS MORE CONTROL.

Welders can make fast, easy weld parameter changes.

- Even while a weld is being laid, precise adjustments can be made with Adjust While Welding (AWW™) technology
- There's no need for a welder to weld with non-optimal settings just to avoid a long walk to the power source
- There's less chance of an incorrect weld process being used with Auto-Process Select™
- Changing weld polarity is easier with an XMT® 350 FieldPro™ system with Polarity Reversing
- Avoid inadvertent parameter changes to welding machines that may be clustered together
- Returning to a previous weld process is automatic
